SRI DATTA SIDHARDHA KONDETI

+91 9100934066 | sridatta.k99@gmail.com | github.com/siddu-k | siddu.pages.dev | Andhra Pradesh, Kakinada
linkedin.com/in/ksridatta

SKILLS

Languages:	Python, Java, SQL, Bash, HTML, CSS
Cloud Technologies:	AWS (EC2, S3, IAM, VPC, ECR, RDS, Lambda, API Gateway, DynamoDB)
Build Tools:	GitHub Actions, Jenkins, Docker, Docker Compose
Developer Tools:	Linux, Git & Github, Nginx, Prometheus, Grafana

EXPERIENCE

Cloud & DevOps Engineering Intern | Datavalley Inc **Jun 2026 - Present**

- Gaining hands-on experience in Cloud Computing and Software Engineering practices through structured learning and practical assignments.
- Working with AWS services, Linux administration, Git, Docker, Jenkins and CI/CD concepts.
- Developing skills in cloud architecture, containerization, and deployment automation while working on real-world use cases.

PROJECTS

TaskManager | CI/CD and DevSecOps Pipeline on Cloud GitHub ->

- Built a containerized Task Management REST API using Spring Boot, PostgreSQL, Docker, and Docker Compose, deployed on an AWS EC2 instance.
- Developed a Jenkins CI/CD pipeline to automate build, testing, Docker image creation, and image publishing to Amazon ECR.
- Integrated SonarQube, Gitleaks, and Trivy to enforce code quality, secret detection, and container security scanning.
- Implemented monitoring and observability using Prometheus and Grafana for real-time application and container metrics visualization.

Satey | Serverless AI Voice-Activated Emergency System GitHub ->

- Engineered an AI-powered voice-activated safety platform featuring offline wake-word detection via Vosk speech recognition for hands-free emergency alerts.
- Architected a scalable, real-time backend using AWS Lambda, API Gateway, and DynamoDB, implementing IAM roles to process and distribute live location and sensor data.
- Designed an automated emergency response system with live location tracking, fall detection, auto-calling/messaging, and photo capture, pushing real-time multi-device notifications via Firebase Cloud Messaging.

Autonomous AI Rover | Edge AI Navigation & IoT Telemetry with AWS GitHub ->

- Engineered an autonomous rover using an ESP32 microcontroller with PWM motor control and compass-based navigation, interfaced with a multi-threaded Flask REST API backend deployed on AWS EC2.
- Implemented real-time computer vision using MiDaS for monocular depth estimation and DeepFace for facial recognition, enabling dynamic path planning, obstacle classification, and target tracking.
- Architected a modular mission control dashboard to visualize split-screen video HUDs and live navigation metrics, integrating Amazon RDS (PostgreSQL) for remote configuration and telemetry storage, Amazon S3 for mission data persistence, and Amazon CloudWatch for system observability.

CERTIFICATIONS

- **OCI AI Foundations Associate** | Oracle, 2025
- **OCI Cloud Foundations Associate** | Oracle, 2025
- **Network Security** | ISC2, 2026
- **AWS Cloud Practitioner Essentials** | AWS, 2025
- **AWS Cloud Security Foundations** | AWS, 2026
- **AWS Generative AI Foundations** | AWS, 2025

EDUCATION

B.Tech in Computer Science and Engineering **Expected July 2028**

Pydah College of Engineering CGPA: 8.5
